# **MOELLER STONE CARE**

# SLATE

TI-12

# - cleaning and maintenance -

Care instruction tested to DIN 18332 (EN 12440)

## **CONDITIONS**

When treating a newly laid surface ensure sufficient drying time for the moisture to escape from the surface and substructure (maximum 2-4% residual moisture content).

Allow 2-3 weeks drying time for an adhesive bed and 4-6 weeks for mortar bed.

Drying times are indicative only and are subject to variation depending on the weather and the object and can be longer.

It's essential that any under-floor heating has been switched off and the surface is at a normal temperature, adequately cleaned, free of stains, dry and absorbent.

Always test in an inconspicuous place to determine suitability and coverage. Always read the labels carefully. Ensure the area around the surface to be treated is well ventilated.
